NUM. 226

MONDAY, NOVEMBER 1. 1742.

Rome, Oct. 13.

N the last Week all the Servants of Cardinal Tencin were dismissed, and one of his Gentlemen went about to the College of Cardinals with Excuses for not having taken Leave on his Departure from this City. There are many People employed in this State to enlist Soldiers to compleat both the

Spanish and Neapolitan Troops, which they execute with Success. A Report is spread about, that Orders have been directed from the Spanish Court to that of Naples, to restore the five Regiments, whereof two are of Horse, and three of Foot, which the King of Spain sent to Don Carlos when established in the Two Sicilies, and it was talked that Part of these Troops were actually in March to join M. de Gages, of which however there is yet no Certainty. A Troop of an hundred Horse, from Orbitello, passed by this City on their March to M. de Gages's Army. We hear that the French King has appointed M. St. Abbin, Bishop of Cambray, his Minister at this Court.

Florence, Oct. 20. Since M. de Gages's taking upon him the Command of the Spanish Army, he has raised an Italian Regiment of Light Horse, composed of Smugglers very well acquainted with the By-ways, in order to make head against the Queen's Hussars, and he has appointed one Vimercati, a famous Adventurer and bankrupt, to command them. He has raised likewise one thousand Foot, most of them of the Romagna, to make use of against the Croats and Scavonians. The Vanguard of the Spanish Army, consisting of 2500 Men, arrived the 12th from Imola to Castel San Pietro, and was followed the 14th by the whole Army. The former advanced that Day to San Lazaro. The 15th the whole Army quartered in the Neighbourhood of the Town of Boulogne, and General Gages lodged in a Palace of the Family of Belloni, without the Gate of Castiglione. The 16th the Spaniards posted 16 Soldiers at each Gate of the Town of Boulogne, upon Pretence of preventing Desertion. Three Companies of Grenadiers of the Spanish and Walloon Guards have taken Possession of the Bridge of Rheno. The Army, consisting of 2500 Men, is cantoned in the Houles round about Boulogne, from the Roman Road to that of Modena. They seem to be secure of not being attacked, since they have cantoned their Forces in such a manner, that it would require a considerable time to assemble them. It is said they demand from that City a considerable Sum of Money to indemnify them for the Officers Baggage, which the Hussars carried off from the Convents where they were deposited when the Duke de Montemar retired towards Rimini. Count de Traun has caused all the Forces in the Low Country of the Boulogne about the Marano, which Cardinal Alberoni had gather'd together for the Use of the Spanish Army, to be carried off, and having ordered all the Hussars to return to his Army, he has entered his former Camp at Buonporto, having also taken Possession of Final, to be near at hand to cut off the March of the Spaniards, in case they would go to Ferrara. Count d'Ampremont is between Ambrogio and Spilemburg, having also posted some Men on this side the River, at a Place named Bazano over-against Spilemburg, seeming as if he intended to fortify himself there. General Braitwitz, who commands the Troops of Tuscany, has garrisoned the Fortress of San Martino, in the Mugello, towards the Boulogne, with some regular Troops and Militia, which will be reinforced with greater Number; he has likewise put a more numerous Garrison into the Fortress of Terra del Sole in the Grand Ducal Romagna, and 200 Troopers in the Town of Prato, and he takes all possible Precautions to cover this Country against any Invasion from the Enemy. The Electress Dowager Palatine has been taken ill of a Fever, and St. Anthony's Fire in her Left Arm: She had lighted the same, and went Abroad three Days following, but is now again confined to her Bed.

From the London Gazette.

London, Oct. 29. Yesterday Robert Willmott, Esq; Lord Mayor Elect for the Year ensuing, was sworn at Guildhall, when the Chair, and other Ensigns of Mayoralty, were surrendered to him in the accustomed manner.

This Day the new Lord Mayor, accompanied by the late Lord Mayor, Aldermen, Recorder, and Sheriffs, in their Scarlet Gowns, went in their Coaches to the Water-Side; the Sword and Mace being carried before them, and the City Officers attending, and from thence proceeded in the City Barge, attended by the several Companies in their respective Barges, adorned with Streamers and Pendants, to Westminster; and having walked round the Hall, and solemnly saluted all the Courts, they went to the Exchequer Bar, and the Lord Mayor did there take the Oaths appointed, and having recorded Warrants of Attorney in the proper Courts, returned by Water to Blackfriars, and from thence in Coaches with the usual Solemnity to Guildhall, where a magnificent Entertainment was provided, at which were present the great Officers of State, divers of the Nobility, Lords of his Majesty's most Honourable Privy Council, the Judges, and other Persons of Quality and Distinction.

The Sea Nymph, Love, bound from Youghall to Lisbon, was taken the 17th of September by a Spanish Privateer, and carried into Vigo.

Saturday last being the Anniversary of his Majesty's Birth Day, who then entered into the 60th Year of his Age, the Morning was ushered in with Ringing of Bells. At Noon there was a splendid Appearance of the Nobility, foreign Ministers, and other Persons of Distinction, to pay their Compliments to his Majesty. At one o'Clock the Park and Tower Guns were fired, and the Evening concluded with Bonfires, Illuminations, and all other Demonstrations of Loyalty throughout the Cities of London and Westminster.

The Ode for the Day, composed by Colley Cibber, Esq; Poet Laureat to his Majesty, and set to Musick by Dr. Maurice Green, Master of his Majesty's Band of Musick, was performed in the Great Council Chamber, before his Majesty, the Royal Family, and several other Persons of Distinction. The Vocal Parts by Mr. Abbot, Mr. Beard, Mr. Baily, and several of the Gentlemen of his Majesty's Chapel Royal. The Instrumental Parts by his Majesty's Band of Musick.

WHILE Ambition flies to Arms,
And gives the hara'd World Alarms,
While, by Insidious Arts ally'd,
Dependent Princes serve her Pride;
Paternal GEORGE, to break their Chains,
His timely sulsive Power exerts;
Their Jarring Arms to Union gains,
And to the Weak new Strength imparts.

British Influence thus inspires,
Our ancient Friends regain their Ground;
Ambition, bleeding, now retires,
Or finds the Balm to heal her Wound.
What Austria's due Support demands,
GEORGE and his Senate shall supply;
Till Lordly Spoilers void her Land,
Or in the Field they wasted, die.

In the Evening there was a Ball for the Lords and Ladies, and other Persons of Distinction, which was opened by their Royal Highnesses the Prince and Princess of Wales. His Majesty retired about twelve o'Clock, and the Company broke up about One.

Last Week died the Rev. Mr. Sanderson, an eminent Dissenting Minister, at Yowell in Northamptonshire.

A Court of Admiralty will be held on Wednesday next at Doctor's Commons, for the Trial of the Santa Maria, laden with Cocoa, which consists of 113 Serons, and 52 Bags, taken by the Diamond Man of War, and carried into Portsmouth.

On Monday the 8th Instant will be recalled at the Pay Office in Broad-street, the short Allowance Money due to the Colchester, Dunkirk, Faulkland, Hawk Sloop, Kent, Rye, and the Shrewsbury.

On Friday Night last died at his Lodgings in York Buildings Capt. Dennison, Commander of the Orford Man of War, a Seventy Gun Ship, who lately arrived from the West-Indies. He was an old experienced Officer, and always behaved in such a handsome manner to the Sailors, that his Death is greatly lamented.

Yesterday Morning about three o'Clock a House fell down in Savoy Alley in the Strand, by which unhappy Accident three Women and a Boy were killed, and three more Persons desperately wounded, insomuch that their Lives are despaired of.

THE Elements of ALGEBRA, in a

New and Easy Method, with their Use and Application, in the Solution of a great Variety of Arithmetical and Geometrical Questions, by General and Universal Rules.

To which is prefix'd, An Introduction containing a succinct History of this Science.

By Mr. NATHANIEL HAMMOND, of the Bank.

Extract from the Account of this Book in the Works of the Learned.

The World has long complained of the Want of a proper Introduction to Algebra. Some are so very concise, as if they were contriv'd not to teach but introduce a Teacher; others again are larger, but wrote with so little Condescension to the Understandings of such as are altogether unacquainted with the Science, that they are of very little Use to those who are most inclined to make use of them. Whence it comes to pass, that few find it practicable to make any Progress in Algebra without a Master, tho' certainly the Science in itself is far from surpassing a clear Head, and a tolerable Understanding.

The Design of this Treatise, which is of a reasonable Bulk, and which contains nothing which is not solid, and to the Purpose, is to assist such as are engaged in teaching Algebra with a regular Method, and a large Stock of Examples; so that their Scholars may find Employment in their Absence; and to enable such as live in Country-Places, and must consequently want all other Tutors, except Books, to acquire such a Skill in this Science, as may enable them to spend a Portion of their Time agreeably in the Cultivation of their better Parts, and in rendering a natural Method of enquiry after Truth habitual.

The Treatise begins with a copious Explication of the Fundamental Principles of the Art, and of the Signs and Method of Notation used therein. The Author then proceeds to the several Rules, explaining them carefully and copiously in all their various Cases; so that with a moderate Attention it is simply impossible for a Person, who desires to be Master of Algebra, to miss of his End.

We never find this Writer advancing any thing out of its proper Place, or burthening the Mind of his Scholar with Rules, before they become necessary: He professes to have imitated the judicious Euclid in this Respect; and he has done it with equal Art and Felicity. By this means he has delivered the young Student in Algebra from that which is usually the most fatiguing Part of the Science, viz. The Doctrine of Surds, in the Manner in which it is usually taught. By the same Means he leads his Reader directly to Equations; and, by shewing him the Profit he is to reap from this Science, encourages him to overcome all its Difficulties. But having thus laid a strong and rational Foundation, he moves more slowly through the rest of his Work, that whoever follows him, may be obliged to become Master of ever Branch of the Art, so as to be a compleat Algebraist, before he quits his Book, and not a Smatterer.

Quadratic Equations, and the Art of managing Converging Series, the admirable Invention of the incomparable Newton, are here so clearly explained, and their several Cases so plainly set down, and so thoroughly explicated, that it may be truly said, there are no where else such Instructions to be met with. At the Close of the Book, we find abundance of Observations, necessary for enlightening such Minds as are willing to proceed still farther in analytic Discoveries; so that considering the Completeness of this Work, and that too is very moderate, it is as complete as possibly can be expected: And he who is thoroughly versed in it, will find no great Difficulties, when he proceeds to sublimer Studies. The Language is plain and natural, the Book is more copious than any other in Examples, and the Illustrations of them are so full and clear, that it is impossible to mistake their Meaning.
